

## SNiPER is Eco-friendly

SNiPER does not emit noxious odors nor does it contain or produce Volatile Organic Compounds and is a commercial GREEN product. It is qualified to destroy the most harmful of pathogens while remaining safe to our environment and thus for our future.

SNiPER is non-toxic to humans, plants and animals. It is biodegradable, hypo-allergenic, oxidizes toxic gas emissions and has the highest efficacy. SNiPER is bio-based, chlorine-free, phosphate-free and has no noxious fragrance.

SNiPER is EPA Registered Non-Toxic. It is an excellent cleaning and disinfecting system that far exceeds other cleaning products. It will keep all surfaces from harboring bacteria, molds, and viruses with its sanitizing action.

SNiPER can be used by Airlines, Airports, Auto & RV's, Bars, Bus Lines, Churches, Coroner's Offices, Fire Dept, Government Offices, HVAC, Industrial Plants, Jails, Laundries, Malls, Marinas, Police Dept, Ports, Poultry Farms, Poultry Processing Plants, Prisons, Restaurants, Smoke Odor, Taxi's, Trains, Veterinarians, Zoos and much more.

**SNiPER<sup>®</sup>**  
**THE IDEAL BIOCIDES**

**For the Military and  
Police**

## Protect your Employees

SNiPER is certified to kill Swine Flu (H1N1), Bird Flu (Avian), MRSA (Staph), Salmonella, E coli, Legion Ella, Aspergillus, Stachybotrys and much more. SNiPER can be sprayed directly on anything to protect against infection and to eliminate odor.

Use SNiPER in patrol cars for the disinfection and cleanup of blood, vomit and urine. Eliminate smoke odor. Neutralize pepper spray. Spray on police dogs for odor elimination, and protection from bacteria and virus. Clean and disinfect crime labs. SNiPER does not produce a noxious odor or leave a filmy residue. SNiPER can be fogged to eliminate strong malodors from chemicals such as formaldehyde, etc. SNiPER restores an indoor facility or vehicle to a fresh and pleasant environment.

Many illnesses come from dirty and untreated HVAC units. Unmaintained HVAC units can also lead to higher utility costs. Air ducts should be treated with SNiPER for disinfection and residual protection. Systems are available to connect directly to HVAC units or Cooling Towers to minimize the risk of viral, bacterial and mold outbreaks by systematically fogging the building or specific area with SNiPER to sanitize and deodorize continually.

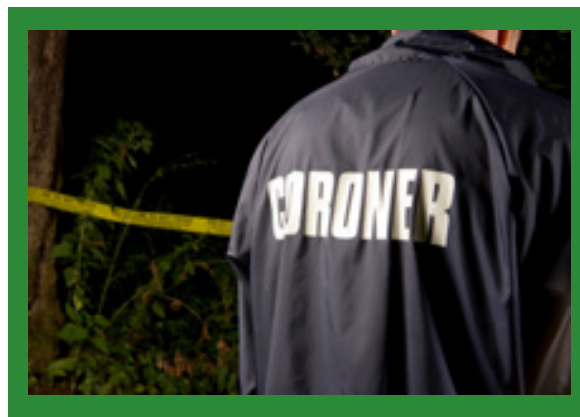

## Disinfect & Sanitize

Bacteria, Virus & Mold spread quickly creating Sick Building Syndrome. Protection is a must for all personnel.

SNiPER is safe, non-toxic and extremely effective. Its power lies in its superior formulation. It kills pathogens from the inside out rendering them completely inactive. Some disinfectants only weaken micro-organisms with a poison and the microbial is able to build up a resistance to the poison. SNiPER takes apart its target on a molecular level destroying it so it cannot revive. This ensures that micro-organisms will not become immune and that SNiPER will deliver exceptional results every time. SNiPER prevents the development of "Superbugs"!

"I believe that use of these products will make an important contribution to safe and effective indoor air quality."

Herman Sabath, Ph.D. MPH CMC/CMI  
Global Leader in Microbial Infections and  
Indoor Environments

## Extended Deployment Tank Crews

Spray SNiPER on all hard surfaces to keep the environment healthy. Eliminate body malodors on extended, close quarter operations.

## Disinfect Equipment

It is safe and non-corrosive. Clean all surfaces to remove toxic residue and unwanted microbial contamination.

## Personal Hygiene

Use SNiPER for all of your cleaning and disinfecting needs. Sanitize hands instantly and more effectively. SNiPER is non-flammable unlike alcohol-based sanitizers. Wash clothes in SNiPER. Spray on uniforms, on socks, in boots, in helmets, and more. Use to disinfect utensils and food containers.

## Latrine Duty

SNiPER can be applied to all surface areas of the latrine to kill pathogens as well as eliminate malodor.

## Biohazard Prevention

This ideal biocide has proven its efficacy in killing the most life threatening bacteria, as well as oxidizing such toxic fumes as hydrogen sulfide, methane, ammonia and formaldehyde. SNiPER is non-toxic and safe.

**SNiPER is the number one disinfectant!**
